

RINKAL YADAV

Java Backend Developer | Spring Boot | REST APIs | SQL
Bengaluru, Karnataka, India | Email: rinkalbyadav@gmail.com | Phone: +91-9170285408 | [LinkedIn](#)

PROFESSIONAL SUMMARY

Java Backend Developer with hands-on experience building and maintaining enterprise banking applications using Java, Spring Boot, Spring MVC, Spring Data JPA, and Hibernate. Skilled in designing and developing secure RESTful APIs, implementing Spring Security and JWT-based authentication, and working with MySQL for relational data modeling and query optimization. Experienced in layered architecture, SOLID principles, and Agile development practices, with a strong focus on writing clean, maintainable, and well-tested code. Comfortable collaborating with QA and frontend teams during requirement analysis, sprint planning, and production support. Continuously upskilling in modern backend technologies, cloud computing, DevOps practices, and AI-powered application development to stay current with evolving industry standards.

PROFESSIONAL EXPERIENCE

Software Developer — E-Mech Solutions Private Limited

Feb 2025 – Present

Bengaluru, Karnataka

- Developed and maintained backend modules for an enterprise banking application using Java, Spring Boot, and Spring MVC, following layered architecture and SOLID design principles.
- Designed and implemented RESTful APIs to support core banking functionality, ensuring consistent request/response contracts for integration with the Angular frontend.
- Built data access layers using Spring Data JPA and Hibernate, mapping relational entities to Java objects and optimizing queries against a MySQL database.
- Implemented authentication and authorization workflows using Spring Security and JWT to secure REST endpoints and protect sensitive banking data.
- Translated business requirements into technical specifications by collaborating with business analysts and senior developers during requirement analysis sessions.
- Implemented business logic for core banking workflows, including validation rules, exception handling, and data integrity checks.
- Identified and resolved backend defects reported during QA cycles and production support, performing root-cause analysis and applying targeted fixes.
- Participated in code reviews to maintain coding standards, improve code quality, and share knowledge with team members.
- Wrote and executed unit tests to validate business logic and reduce regression issues before deployment.
- Used Postman to test and validate REST API endpoints during development and before handoff to QA.
- Actively participated in Agile ceremonies, including sprint planning, daily stand-ups, and sprint reviews, using Git for version control and collaborative development.

PROFESSIONAL TRAINING

Software Development Training — Codegnan Destination

Sep 2024 – Feb 2025

Bengaluru, Karnataka

- Completed intensive, industry-oriented training covering Core Java, Advanced Java, JDBC, Servlets, and JSP for backend web application development.
- Gained practical experience with Hibernate, Spring Framework, Spring Boot, Spring Data JPA, and Spring Security for building enterprise-grade applications.
- Built and consumed RESTful APIs, tested endpoints using Postman, and worked with MySQL for database design and querying.
- Developed frontend integration skills using Angular, HTML, CSS, JavaScript, and TypeScript.
- Used Git and Maven for version control and project/dependency management throughout coursework and projects.

PROJECT EXPERIENCE

Online Loan Management & Payment Processing System

Domain: Banking & Financial Services (BFSI) | Role: Software Developer | Team Size: 6

Business Overview

Contributed to a banking application that digitizes the end-to-end loan lifecycle, covering customer onboarding, loan application submission, document and eligibility verification, credit score validation, loan approval, and disbursement. The system also handles EMI schedule generation, payment processing, repayment tracking, reporting, dashboards, and automated notifications, enabling the bank to move from manual, paper-based loan processing to a streamlined digital workflow.

Technical Contribution & Architecture

- Developed backend services for the loan application module using Java, Spring Boot, and Spring MVC within a layered (Controller–Service–Repository) architecture.

- Designed and implemented RESTful APIs for customer onboarding, loan application submission, and document verification workflows.
- Built data models and repositories using Spring Data JPA and Hibernate to manage customer, loan, and repayment data in MySQL.
- Wrote optimized SQL queries for loan eligibility checks, EMI schedule generation, and repayment tracking reports.
- Implemented Spring Security with JWT-based authentication to secure sensitive customer and financial data across API endpoints.
- Designed role-based access control to restrict loan approval and disbursement actions to authorized users only.
- Applied SOLID principles and clean coding practices to keep the codebase modular, testable, and maintainable.
- Implemented centralized exception handling and input validation to ensure consistent error responses and data integrity.
- Developed business logic for credit score validation and loan eligibility rules based on defined banking criteria.
- Built EMI schedule generation logic to calculate installment amounts, due dates, and interest breakdowns.
- Implemented payment processing logic to record repayments and update outstanding loan balances accurately.
- Collaborated with frontend developers to integrate backend REST APIs with the Angular-based customer and admin dashboards.
- Used Postman extensively to test, document, and validate API endpoints before frontend integration and QA handoff.
- Participated in code reviews with senior developers to ensure adherence to coding standards and architectural guidelines.
- Used Git for version control and Maven for dependency and build management across the project lifecycle.
- Worked within an Agile team of 6 members, participating in sprint planning, daily stand-ups, and sprint retrospectives.
- Supported unit testing efforts to validate core business logic, including EMI calculations and eligibility checks.

Business Impact

- Contributed to reduced manual effort in loan processing by helping automate eligibility checks, EMI scheduling, and repayment tracking.
- Helped improve application performance and responsiveness through optimized database queries and efficient API design.
- Strengthened data security by implementing JWT-based authentication and role-based access control for sensitive financial operations.
- Improved code maintainability by following layered architecture and SOLID principles, reducing effort required for future enhancements.

EDUCATION

Bachelor of Computer Applications (BCA)	Graduated 2024
Aggregate: 73%	

CERTIFICATIONS

- Java — HackerRank
- JavaScript — HackerRank
- SQL — HackerRank
- Problem Solving — HackerRank

TECHNICAL SKILLS

Programming Languages: Java, SQL, JavaScript, TypeScript

Backend: Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, JDBC

Security: Spring Security, JWT Authentication

Databases: MySQL; Redis (Learning)

Messaging: Apache Kafka (Learning)

Containerization: Docker, Docker Compose (Learning)

Microservices: Microservices Architecture (Learning), Spring Cloud (Learning)

Cloud & DevOps: Git, GitHub, Maven, CI/CD Fundamentals (Learning); AWS (Learning), GitHub Actions (Learning)

Frontend: Angular, HTML5, CSS3, JavaScript, TypeScript

Testing Tools: JUnit, Mockito, Postman

AI Technologies (Learning): Spring AI, LangChain4j, Prompt Engineering, Vector Databases, Retrieval-Augmented Generation (RAG), AI Agents, Model Context Protocol (MCP)

Core Concepts: OOP, Collections Framework, Exception Handling, Multithreading, SOLID Principles, Design Patterns, MVC Architecture, SDLC, Agile/Scrum
